Financial Times: MEP among the 150 fastest growing companies in Europe

- After being announced FOCUS Wachstumschampion Germany: MEP also among the fastest growing companies in Europe
- Statista and Financial Times publish the “FT1000” ranking – MEP ranks 137

Munich, 10.04.2018: MEP Werke GmbH is on the “FT1000” list, i.e. it is among the 1,000 companies with the highest turnover growth in Europe. This has now been revealed through an international study of Financial Times in cooperation with the renowned market research company Statista. Among ten thousands of candidates, MEP ranked 137.

In autumn 2017, MEP founder and CEO Konstantin Strasser was delighted to receive the German award FOCUS Wachstumschampion – now his company was also listed as one of the best in the European ranking. “We are extremely proud of having managed to more than double our turnover and number of customers each year since launching our solar lease business model “Switch Solar”. Such an award motivates us to keep growing and to contribute to a greener future with every single new client.”

To compile the cross-sector ranking, Financial Times and Statista had asked several thousands of companies in 31 European countries with a high turnover growth to report their turnovers of 2013 and 2016. As a requirement, the turnover in 2013 had to be at least 100,000 Euro and 1.5 million Euro in 2016.

The complete list is available on <https://ig.ft.com/ft-1000/2018/>.

About MEP Werke GmbH:

MEP is headquartered in Munich, Germany. It is one of Germany's leading decentralized energy providers as well as market leader in end-to-end service for photovoltaics and specializes in leasing solar power systems to German residential homeowners at a fixed monthly rate. The parent company and private equity investor Strasser Capital specializes in clean energy investments, financing and operations throughout the EU, with a focus on solar energy. Together with their partner bank, MEP and Strasser Capital developed a unique financing structure, a long-term note issuance program that is secured on a granular portfolio of MEP solar lease receivables.
